

TENTacle Gdynia Urban Node - Summary

'Gdynia Urban node atlas' contains information on transport infrastructure (including road, rail, sea and air infrastructure) in the Municipality of Gdynia.

It presents development directions of the Gdynia urban node transport system in the perspective of 2030 and 2050.

Document describes the transport system solutions for the better quality of life and conducive to the sustainable development.

Green and effective transport is a prerequisite to preserve the prosperity of the city, the region and the whole country. It is crucial for the smooth functioning of the city and for ensuring external connections thanks to which our region will remain open to Europe and the rest of the world.

The atlas consists of four chapters. The first chapter discusses the methodology, considering thematic, spatial and functional scope. The second chapter presents the current state of the transport infrastructure.

The next two chapters present the planned infrastructure with a view to 2030 and 2050.

The atlas is a comprehensive compilation of information, documents, plans and strategies at the European, national, regional, metropolitan and municipal level presented in the form of maps, plans, diagrams with supplemental charts, illustrations and photographs.
